

Voice & Data Cabling

Wired or Wireless.

Our extensive knowledge of the standards specified for various applications helps us determine the best way to install your cable to fulfill your specific business vision.

Typically, we terminate each run into a patch panel connected to a network switch, or in the case of a phone system, into an IP or PBX telephone patch panel. In addition, we offer:

- Structured Network Cabling for Data and Phone Systems
- Voice/Data Network Cabling (Cat 5 & Cat 6 Wiring)
- Business and VoIP Phone Systems
- WiFi and Wireless Network Installation
- Patch Panel Installation and Termination
- Testing and Troubleshooting

CCTV

- DVR, CCTV, and Video Security Systems, Sales and Installation
- Wireless Cameras and Wireless Video Systems
- Day / Night Security Cameras and Video Surveillance
- Alarm Systems
- Remote Viewing Surveillance Systems
- Digital Video Recorders (DVR)
- Card Access Integration
- Wireless Video Systems
- Multi-Location Surveillance
- Indoor and Outdoor Surveillance

Network Services

Get Connected.

A network is a server component accessed by client components. E-mail, printing, and network file system services are common functions provided on local area networks.

Networks can be simple or extremely complex. Each network has its own authentication regimen and standard usage guidelines and permissions. As your network administrator, we are able to ensure that servers are updated with the latest software and patches, connections to all users are strong, and reports on network usage are provided regularly. In addition, we offer:

- Maintenance of Your Local Area Network
- Monitoring of Applications and Software Functionality and Availability
- Maintenance of Physical and Logical Network Infrastructure, LAN/WAN IP Addresses, and Domain Name Service (DNS)
- Upgrades, Updates, Patches, and Security Additions
- Initial Troubleshooting of Existing Building, Cabling, and Connections
- Network Management and Monitoring

Our Network Solutions Provide Your Organization with:

- Secure Common Database Applications
- Secure Remote Users' Access
- Shared Files and Printing Capabilities
- User Restrictions-to-Software Applications, Printing, and Data and Web Access
- Network Set Up, Wired or Wireless for Windows™ and Apple™
- Internet Service Installation
